

Bedienungsanleitung (Originalanleitung)
Druckmessumformer Serie HDA 4000
für das Medium Wasserstoff
Eigensicher, nicht funkend.
ATEX, IECEx 2-fach Zulassung

Operating Instructions (Translation of the original operating instructions)
Pressure Transmitter Series HDA 4000
for medium hydrogen,
Intrinsically safe,
non-sparking.
ATEX, IECEx dual approval

1 Allgemeines

Falls Sie Fragen bezüglich der technischen Daten oder Eignung für Ihre Anwendungen haben, wenden Sie sich bitte an unseren **technischen Vertrieb**. Die Druckmessumformer der Serie HDA 4000 werden auf rechnergesteuerten Prüfplätzen abgeglichen und einem Endtest unterzogen. Sie sind wartungsfrei und sollten beim Einsatz innerhalb der Spezifikationen (siehe Technische Daten) einwandfrei arbeiten. Falls trotzdem Fehler auftreten, wenden Sie sich bitte an den **HYDAC-Service**. Fremdeingriffe in das Gerät führen zum Erlöschen jeglicher Gewährleistungsansprüche sowie der ATEX und IECEx-Zulassungen.

2 Funktion

Das vom Sensor gemessene Drucksignal wird in ein dem Druck proportionales, analoges 4..20 mA Signal umgewandelt.

3 Montage und Inbetriebnahme

Die Druckmessumformer können auf Prozess-Seite direkt über den Gewindeanschluss montiert werden. Es ist darauf zu achten, dass die Membrane während der Montage nicht beschädigt wird.

Um in kritischen Anwendungsfällen (z.B. starke Vibrationen oder Schläge) einer mechanischen Zerstörung vorzubeugen, empfehlen wir das Gerät mittels einer Schelle mit Elastomereinsatz zu befestigen, sowie den Hydraulikanschluss über eine Minimesseleitung zu entkoppeln.

Anzugsdrehmoment siehe Abmessungen.

Druckmessumformer mit einem Nenndruck ≤ 100 bar (≤ 1500 psi) besitzen einen Druckausgleich zum Umgebungsdruck. Hierzu befindet sich unter der Steckerbefestigung eine kleine Bohrung. Diese ist von innen mit einer speziellen Membrane abgedeckt, die verhindert, dass Feuchtigkeit von außen in das Gerät eindringen kann. Um eine Verstopfung der Bohrung zu verhindern, sollte bei feuchter und staubhaltiger Umgebung die Montage daher waagrecht oder senkrecht mit dem Druckanschluss nach unten erfolgen.

Bei Druckmessumformern mit einem Nenndruck von ≤ 100 bar (≤ 1500 psi) und einem $\frac{1}{2}$ -14 Conduit elektrischen Anschluss ist der Druckausgleich bei Einzeladern mittels einer kurzen Entlüftungslitze realisiert, bei Mantelkabel mittels einem im Kabel integrierten Entlüftungsschlauch. Es ist sicherzustellen, dass die Entlüftung nur im Nicht-Ex-Bereich erfolgt.

Die Installation muss von einem Fachmann nach den jeweiligen Landesvorschriften zu potentiell explosionsgefährdeten Umgebungen durchgeführt werden (z.B. IEC / EN 60079-14).

Die Druckmessumformer der Serie HDA 4000 tragen das **CE** - Zeichen. Die Konformitätserklärung befindet sich im Anhang.

Die Forderungen der Normen (siehe techn. Daten) werden nur bei ordnungsgemäßer und fachmännischer Erdung des Druckmessumformergehäuses mittels des Prozessanschlusses oder dem $\frac{1}{2}$ NPT Conduit erreicht. Sofern eine grün/gelbe Ader vorhanden ist, darf diese zusätzlich, aber nicht zur alleinigen Erdung verwendet werden. Bei Schlauchmontage des Druckmessumformers muss das Gehäuse separat geerdet werden.

Die zugehörigen eigensicheren Geräte (z.B. Zenerbarrieren) sind ebenfalls zu erden. Ein Potentialausgleich entlang des eigensicheren Stromkreises ist in der Ausführungsvariante N (Isolationsspannung ≤ 50 VAC) erforderlich.

Bei der Serie HDA 4000 in der Ausführungsform H (Isolationsspannung ≤ 500 VAC) darf die Kabellänge zum Druckmessumformer maximal 30m betragen (Überspannungsschutz nach DIN EN 61000-6-2). Wenn die Kabellänge 30m überschreitet, muss der Überspannungsschutz kundenseitig sichergestellt werden.

4 Wichtige Hinweise für die Installation

4.1 Installationshinweise für Geräte mit ½-14 NPT Conduit

Mechanische Installation

Für die Montage des Prozessanschlusses darf nur die Schlüssel­fläche an der Prozessanschlus­seite des Druckmessumformers verwendet werden.

Elektrische Installation

Die Schlüssel­fläche an der Seite des elektrischen Anschlusses am ½-14 NPT Conduit dient nur zum Fixieren des Druckmessumformers bei der Conduit-Installation.

4.2 Installationshinweise für Geräte mit Schlagschutz

Installationshinweise für Geräte mit M12×1 Stecker mit Schlagschutz-/Sicherungs- Metallhülse für den Einsatz in:

ATEX

II 3G Ex nA IIC T6, T5 Gc

IECEx

Ex nA IIC T6, T5 Gc

Zur Einhaltung der Sicherheitsrichtlinien ist, für diese Schutzklassen und Einsatzbereiche, die Verwendung der Schlagschutz-/ Sicherungs- Metallhülse zwingend erforderlich.

Die Schlüsselfläche 27mm an der Seite des elektrischen Anschlusses dient nur zum Fixieren des Druckmessumformers bei Installation der Schlagschutz-/Sicherungs-Metallhülse.

Das Anschlusskabel mit M12x1 Stecker muss im spannungslosen Zustand ordnungsgemäß angeschlossen werden, damit sich die Steckverbindung bei Vibrationen nicht lösen kann.

Die mitgelieferte Schlagschutz-/Sicherungs-Metallhülse muss ebenfalls ordnungsgemäß mit einem Anzugsdrehmoment von 20 Nm montiert werden.

Auch die Trennung des M12x1 Steckers darf nur im spannungslosen Zustand erfolgen.

5 Sicherheitshinweise

Wenn das Etikett nicht mehr lesbar ist, muss der Druckmessumformer außer Betrieb gesetzt werden.

Die Druckmessumformer sind generell mit einer geeigneten, eigensicheren Barriere zu betreiben.

Die Dichtungen sind in regelmäßigen Abständen, in Abhängigkeit der klimatischen Bedingungen und dem Medieneinfluss, auf ihre Funktionstüchtigkeit zu kontrollieren, und wenn erforderlich auszutauschen. Ersatzdichtungen und –flachdichtungen können von der HYDAC ELECTRONIC GMBH bezogen werden. (Standarddichtungen siehe technische Daten). Diese Überprüfung muss mindestens alle drei Jahre durchgeführt werden.

Bei gleichzeitigem Einsatz in Zone 0 und 1 wirkt die Metall-Messmembrane des Druckmessumformers als "Trennwand" zwischen Zone 0 und Zone 1. Die Dicke dieser "Trennwand" ist generell $\leq 1\text{ mm}$ und bei Nenndruck unter 100 bar $\leq 0,2\text{ mm}$. Zur Sicherstellung dieser Trennfunktion ist unbedingt auf die Verträglichkeit der Messmedien mit den verwendeten Werkstoffen des Druckmessumformers zu achten, ebenso sind die Überlast- und Berstdrücke unbedingt einzuhalten (Angaben hierzu siehe "Technische Daten").

Es ist unbedingt auf die Verträglichkeit der Messmedien mit den Dichtungen und den verwendeten Werkstoffen des Druckmessumformers zu achten, ebenso sind die Überlast- und Berstdrücke unbedingt einzuhalten (Angaben hierzu siehe "Technische Daten" und "Sicherheitstechnische Daten" der EG Baumusterprüfbescheinigung).

Die interne Messmembrane des Druckmessumformers ist unbedingt vor mechanischer Beschädigung zu schützen.

Ebenso ist auf eine ausreichende Dichtung zwischen den Zonen zu achten.

Die Daten hinsichtlich der Nutzung in explosionsgefährdeten Umgebungen sind in jedem Fall zu berücksichtigen.

Der Betrieb ist nur zulässig, wenn anwendungs- und prozessbedingte intensive elektrostatische Aufladungsprozesse ausgeschlossen sind.

Aus Sicherheitsgründen sollten Stromversorgung / Ausgangsstromkreis des Druckmessumformers geerdet werden.

Zur Einhaltung der Sicherheitsrichtlinien ist für die Schutzklassen und Einsatzbereiche:

ATEX: II 3G Ex nA IIC T6, T5 Gc

IECEx: Ex nA IIC T6, T5 Gc

die Verwendung der Schlagschutz-/ Sicherungs- Metallhülse zwingend erforderlich.

Die Schlagschutz-/Sicherungs- Metallhülse ist mit einem Anzugsdrehmoment von 20 Nm anzuziehen.

Anmerkung

Die Angaben in diesem Handbuch beziehen sich auf die beschriebenen Betriebsbedingungen und Einsatzfälle. Bei abweichenden Einsatzfällen und/oder Betriebsbedingungen wenden Sie sich bitte an die entsprechende Fachabteilung.

Bei technischen Fragen, Hinweisen oder Störungen nehmen Sie bitte Kontakt mit Ihrer HYDAC - Vertretung auf.

Technische Änderungen sind vorbehalten.

1 General

If you have any queries regarding technical details or the suitability of the unit for your application, please contact our **Technical Sales Department**. The series HDA 4000 pressure transmitters are individually tested and calibrated at a computer operated test station. They are maintenance-free and operate perfectly when used according to the data (see Technical Specifications). However, if there is a cause for complaint, please contact **HYDAC Service**. Interference by anyone other than HYDAC personnel will invalidate all warranty claims as well as the ATEX and IECEx approvals.

2 Function

The pressure signal measured by the sensor is converted into a proportional analog 4..20 mA signal.

3 Installation and commissioning information

The pressure transmitters can be installed directly on the process side via the threaded connection. It is important to ensure that the membrane is protected from mechanical damage during installation.

In order to prevent mechanical damage when dealing with critical applications involving heavy vibrations or blows, for example, we recommend securing the unit with an elastomer clamp and decoupling the hydraulic ports via a Minimesse hose.

Tightening torque see dimensions.

Pressure transmitters with a rated pressure of < 100 bar (≤ 1500 psi) provide for pressure equalization with the ambient pressure. This is enabled by a small hole underneath the plug connector. The connector is covered on the inside by a special membrane which prevents moisture from seeping into the unit from the outside. In order to prevent the hole from becoming clogged, mounting should be done in a horizontal position in moist or dusty environments, or vertically with the pressure port pointing downwards.

On units with a rated pressure of ≤ 100 bar (≤ 1500 psi) and a $\frac{1}{2}$ -14 conduit electrical connection, the pressure equalization with single conductor is realized by means of a short vent line, using jacketed cable, it is realized by means of a cable with an integrated venting hose. It must be ensured that the venting only takes place outside the hazardous area.

Connection is to be done by a properly qualified specialist in accordance with the pertinent regulations pertaining to potentially explosive environments (e.g. EN 60079-14).

The series HDA 4000 pressure transmitters carry the **CE** -mark. The certificate of conformity can be found in the annex.

The requirements of the standards (see technical data) cannot be satisfied unless the pressure transmitter housing is properly grounded via the mechanical connection or the $\frac{1}{2}$ -14 NPT Conduit. If a green-yellow wire is available, it can be used additionally for grounding, but may not be used on its own as the grounding connection. When using hose mounting the housing has to be grounded separately.

The related intrinsically safe devices (e.g. zener barriers) must also be grounded. A potential equalisation is required along the intrinsically safe electrical circuit in the N type model (dielectric strength ≤ 50 VAC).

On the HDA 4000 series, type H (isolation voltage ≤ 500 VAC), the cable length to the pressure transmitter must be max. 30 m (overvoltage protection to DIN EN 61000-6-2). If the cable length exceeds 30 m, overvoltage protection must be provided by the customer.

4 Important mounting instructions

4.1 Installation instructions for units with ½-14 NPT conduit

Mechanical Installation

The process installation of the transmitters may only be carried out utilizing the flats on the process connection side.

Electrical Installation

The flats at the electrical connection side next to the ½-14 NPT conduit only serves to fix the transmitter during conduit installation.

4.2 Installation instructions for units with impact protection

Installation instructions for units with M12x1 connector with an impact protection metal safety sleeve for the use in zones:

ATEX

II 3G Ex nA IIC T6, T5 Gc

IECEx

Ex nA IIC T6, T5 Gc

By adherence to safety guidelines in the protection rating and applications: the usage of the impact protection metal safety sleeve is stringently required.

The electrical installation of the transmitter may only be carried out utilizing the hex. 27 mm flats on the installation of the impact protection metal safety sleeve.

The connection of the cable with M12x1 plug may only be carried out properly in order to prevent the connection from loosening due to vibrations and it must be carried out in voltage-free condition.

The impact protection metal safety sleeve must be properly tightened with a torque of 20 Nm.

Also the separation of the M12x1 connector may only be carried out if the system is in voltage-free condition.

5 Safety information

The pressure transmitter may no longer be used when the label becomes illegible.

The pressure transmitters are to be used in general with a suitable intrinsically safe barrier.

The seals and gaskets are to be checked to see that they function properly prior to mounting and at regular intervals in keeping with the climatic conditions and the influence of the fluid, and to be changed as needed. Replacement seals and gaskets can be obtained from HYDAC ELECTRONIC GMBH. (Standard seal see technical data) This check is to be conducted at least every three years.

If used simultaneously in zones 0 and 1, the metal membrane of the pressure transmitter serves as a partition wall between zones 0 and 1. The thickness of this partition wall is generally $\leq 1\text{ mm}$, and with a nominal pressure ranging below 100 bar, $\leq 0.2\text{ mm}$. In order to ensure this partition function, the compatibility of the measuring fluids with the used materials is compulsory, as well as the overload and bursting pressures must absolutely be complied with (further details, please see "Technical Data").

It is imperative that the measurement fluid is compatible with the materials used in the pressure transmitter; similarly, the overload pressures and bursting pressures must be adhered to without fail (for these specifications, see the "Technical Specifications" and "Safety Information" of the EC type examination certificate).

The internal measurement membrane of the pressure transmitter is to be protected against mechanical damage.

Please ensure sufficient sealing between the zones as well.

The data pertaining to use in Hazardous Location is to be heeded in any event.

Operation is only permitted when operational and process related intensive electrostatic changes are eliminated.

From a safety point of view, the supply / output circuit of pressure transmitter shall be considered to be connected to earth.

By adherence to safety guidelines in the protection rating and applications:

ATEX: II 3G Ex nA IIC T6, T5 Gc

IECEx: Ex nA IIC T6, T5 Gc

the usage of the impact protection metal safety sleeve is stringently required.

The impact protection metal safety sleeve must be tightened with a torque of 20 Nm.

6 Technical data HDA 4000

Input data												
Measuring ranges	bar	16	25	40	60	100	200	250	400	500	600	1050

Additional Manufacturing
location(s):

This certificate is issued as verification that a sample(s), representative of production, was assessed and tested and found to comply with the IEC Standard list below and that the manufacturer's quality system, relating to the Ex products covered by this certificate, was assessed and found to comply with the IECEx Quality system requirements. This certificate is granted subject to the conditions as set out in IECEx Scheme Rules, IECEx 02 and Operational Documents as amended.

STANDARDS:

The electrical apparatus and any acceptable variations to it specified in the schedule of this certificate and the identified documents, was found to comply with the following standards:

IEC 60079-0 : 2011 Edition:6.0	Explosive atmospheres - Part 0: General requirements
IEC 60079-11 : 2011 Edition:6.0	Explosive atmospheres - Part 11: Equipment protection by intrinsic safety "i"
IEC 60079-15 : 2010 Edition:4	Explosive atmospheres - Part 15: Equipment protection by type of protection "n"
IEC 60079-26 : 2014-10 Edition:3.0	Explosive atmospheres – Part 26: Equipment with Equipment Protection Level (EPL) Ga
IEC 60079-31 : 2013 Edition:2	Explosive atmospheres - Part 31: Equipment dust ignition protection by enclosure "t"

*This Certificate **does not** indicate compliance with electrical safety and performance requirements other than those expressly included in the Standards listed above.*

Schedule

EQUIPMENT:

Equipment and systems covered by this certificate are as follows:

Pressure Transmitter Type HDA 4...-A-...-(...)-I-... and Type HDA 4...-A-...-(...)-E-... is a two wire transmitter used to convert a pressure signal into a 4 – 20 mA output signal. Double Pressure Transmitter Type HDA 4...-AA-...-(...)-E-... (..) is the same type, but fully redundant. Two pressure sensor cells each separated and both are designed as a two-wire (4 - 20 mA) system.

The electrical components of the transmitter are completely encapsulated within a metal enclosure; the electrical connections are done by a connector or via a permanently connected cable. The enclosure of Pressure Transmitter Type HDA 4...-A-...-(...)-g-... and Type HAD 4...-AA-...-(...)-g-... (..) (with g = 9, A, B or C) provides a degree of protection of at least IP64 in accordance with IEC 60529.

All variations of electrical connections are allowed for the intrinsically safe versions.

For thermal data, nomenclature and electrical data refer to Annex 1 to Certificate of Conformity IECEx KEM 08.0014X, issue 4.

CONDITIONS OF CERTIFICATION: YES as shown below:

Pressure transmitters with an enclosure containing light metals, when used in a potentially explosive atmosphere requiring apparatus of equipment Equipment Protection Level Ga or Ma (Category 1 G or M1), shall be installed such, that even in the event of rare incidents, an ignition source due to impact or friction between the enclosure and iron/steel is excluded.

For installation of the pressure transmitter between areas where the use of Equipment Protection Level Ga or Da (Category 1) apparatus is required and areas where the use of Equipment Level Gb or Db (Category 2) apparatus is required, the following applies: The internal separation element shall be protected against environmental stress, which might adversely affect the separation element. The material of the separation element shall be obtained from the data supplied by the manufacturer.

The pressure transmitter may alternatively be used with separately supplied certified cable entries or conduit entries that are rated for the intended application.

IECEx Certificate of Conformity

Certificate No: IECEx KEM 08.0014X

Issue No: 4

Date of Issue: 2016-06-01

Page 5 of 5

DETAILS OF CERTIFICATE CHANGES (for issues 1 and above):

The following product modifications have been assessed:

- added Pressure Transmitter Type HDA 4abc-AA-d-e-Efg-hjj (k), which is the same type as previous evaluated as given in report NL/KEM/ExTR08.0003/03, but conducted completely redundant. Two pressure sensor cells each separated and both are designed as a two-wire (4 ... 20 mA) system;
- the maximum value of Pi is changed from 1 W to 1,4 W (2 x 0,7 W) for the redundant version;
- assessment in accordance with latest edition of EN 60079-26 and EN 60079-31
- KEMA 05ATEX1021 Iss 2 intergrated in this report, Identical products with types of protection Ex ic, Ex nA and Ex tc.

Annex 1 to Certificate of Conformity IECEx KEM 08.0014X, issue 4
Annex 1 to IECEx test report NL/KEM/ExTR08.0003/04

Description

Pressure Transmitter Type HDA 4...-A-...-(-...)-I-... and Type HDA 4...-A-...-(-...)-E-... is a two wire transmitter used to convert a pressure signal into a 4 – 20 mA output signal. Double Pressure Transmitter Type HDA 4...-AA-...-(-...)-E-... (..) is the same type, but fully redundant. Two pressure sensor cells each separated and both are designed as a two-wire (4 - 20 mA) system.

The electrical components of the transmitter are completely encapsulated within a metal enclosure; the electrical connections are done by a connector or via a permanently connected cable. The enclosure of Pressure Transmitter Type HDA 4...-A-...-(-...)-g-... and Type HAD 4...-AA-...-(-...)-g-... (..) (with g = 9, A, B or C) provides a degree of protection of at least IP64 in accordance with IEC 60529.

All variations of electrical connections are allowed for the intrinsically safe versions.

Thermal data

Ambient temperature range:

For Pressure Transmitter Type HDA 4abc-A-d-(e)-lfg-h-i1 j k and Type HDA 4abc-A-d-(e)-Efg-h-i1 j k (versions with a single pressure sensor cell):

- apparatus in types of protection Ex ia I, Ex ia IIC and Ex ia IIIC: -40 °C to +60 °C;
- apparatus in types of protection Ex ic IIIC, Ex ta IIIC, Ex tb IIIC and Ex tc IIIC: -40 °C to +80 °C;
- apparatus in types of protection Ex nA IIC, and Ex ic IIC: -40 °C to +85 °C.

For Double Pressure Transmitter Type HDA 4abc-AA-d-e-Efg-hij (k) (version with two pressure sensor cells):

- apparatus in types of protection Ex ia I, Ex ia IIC and Ex ia IIIC: -40 °C to +70 °C;
- apparatus in types of protection Ex ic IIIC, Ex ta IIIC, Ex tb IIIC and Ex tc IIIC: -40 °C to +80 °C;
- apparatus in types of protection Ex nA IIC, and Ex ic IIC: -40 °C to +85 °C.

Temperature class and the maximum surface temperature:

The temperature class and the maximum surface temperature T and T₅₀₀ are depending on the maximum ambient temperature:

For Pressure Transmitter Type HDA 4abc-A-d-(e)-lfg-h-i1 j k and Type HDA 4abc-A-d-(e)-Efg-h-i1 j k (versions with a single pressure sensor cell):

Maximum ambient temperature	Temperature class	Max surface temperature T	Max surface temperature T ₅₀₀
60 °C	T6	80 °C / 85 °C	90 °C
70 °C	T5	90 °C	100 °C
80 °C		100 °C	110 °C
85 °C	T4		

For Double Pressure Transmitter Type HDA 4abc-AA-d-e-Efg-hij (k) (version with two pressure sensor cells):

Maximum ambient temperature	Temperature class	Max surface temperature T	Max surface temperature T ₅₀₀
60 °C	T6	85 °C	120 °C
70 °C	T5	95 °C	130 °C
80 °C		105 °C	140 °C
85 °C	T4

Electrical data

Intrinsically safe versions:

Supply/output circuit (connections + and -):

in type of protection intrinsic safety Ex ia I, Ex ia IIC, Ex ic IIC and Ex ia IIIC, only for connection to a certified intrinsically safe circuit, with the following maximum values:

Pressure Transmitter Type HDA 4abc-A-d-(e)-.fg-h-i1 j k:

$U_i = 28 \text{ V}$; $I_i = 100 \text{ mA}$; $P_i = 1 \text{ W}$; $C_i = 22 \text{ nF}$; $L_i = 0 \text{ mH}$.

Double Pressure Transmitter Type HDA 4abc-AA-d-e-Efg-hjj (k), when connected to 2 intrinsically safe power supplies:

Signal 1: $U_i = 28 \text{ V}$; $I_i = 100 \text{ mA}$; $P_i = 0.7 \text{ W}$; $C_i = 22 \text{ nF}$; $L_i = 0 \text{ mH}$;

Signal 2: $U_i = 28 \text{ V}$; $I_i = 100 \text{ mA}$; $P_i = 0.7 \text{ W}$; $C_i = 22 \text{ nF}$; $L_i = 0 \text{ mH}$.

Double Pressure Transmitter Type HDA 4abc-AA-d-e-Efg-hjj (k), when connected to 1 intrinsically safe power supply:

Signals 1 + 2: $U_i = 28 \text{ V}$; $I_i = 100 \text{ mA}$; $P_i = 0.7 \text{ W}$; $C_i = 33 \text{ nF}$; $L_i = 0 \text{ mH}$.

From a safety point of view, the supply/output circuit of Pressure Transmitter Type HDA 4...-A-...-(...)-.N-...-... and Type HDA 4...-AA-...-...-N-... (..) shall be considered to be connected to earth.

Other versions:

Supply/output circuit (connections + and -):

$U \leq 28 \text{ V}$ All models;

$P \leq 1 \text{ W}$ Pressure Transmitter Type HDA 4abc-A-d-(e)-.fg-h-i1 j k;

$P \leq 1.4 \text{ W}$ Double Pressure Transmitter Type HDA 4abc-AA-d-e-Efg-hjj (k)

Signal 1 $\leq 0.7 \text{ W}$ and signal 2 $\leq 0.7 \text{ W}$.

12.2 ATEX

CERTIFICATE

(1) EU-Type Examination

(2) Equipment or protective systems intended for use in potentially explosive atmospheres - Directive 2014/34/EU

(3) EU-Type Examination Certificate Number: KEMA 05ATEX1016 X Issue Number: 4

(4) Product: Pressure Transmitter Type HDA 4...-A-...-(-)-A-...-...
Type HDA 4...-A-...-(-)-E-...-... and
Type HDA 4...-AA-...-(-)-E-...-... (-)

(5) Manufacturer: Hydac Electronic GmbH

(6) Address: Hauptstraße 27, 66128 Saarbrücken, Germany

(7) This product and any acceptable variation thereto is specified in the schedule to this certificate and the documents therein referred to.

(8) DEKRA Certification B.V., Notified Body number 0344 in accordance with Article 17 of Directive 2014/34/EU of the European Parliament and of the Council, dated 28 February 2014, certifies that this product has been found to comply with the Essential Health and Safety Requirements relating to the design and construction of products intended for use in potentially explosive atmospheres given in Annex II to the Directive.

The examination and test results are recorded in confidential test report number NL/KEM/ExTR08.0003/04.

(9) Compliance with the Essential Health and Safety Requirements has been assured by compliance with:

EN 60079-0 : 2012 + A11
EN 60079-26 : 2015

EN 60079-11 : 2012
EN 60079-31 : 2014

EN 60079-15 : 2010
EN 50303 : 2000

except in respect of those requirements listed at item 18 of the Schedule.

(10) If the sign "X" is placed after the certificate number, it indicates that the product is subject to the Specific Conditions of Use specified in the schedule to this certificate.

(11) This EU-Type Examination Certificate relates only to the design and construction of the specified product. Further requirements of the Directive apply to the manufacturing process and supply of this product. These are not covered by this certificate.

(12) The marking of the product shall include the following:

IM 1	Ex ia I Ma	II 1 D	Ex ia IIIC Txx °C Da
II 1 G	Ex ia IIC T6/T5 Ga,	II 3 D	Ex ic IIIC Txx °C Dc
II 1/2 G	Ex ia IIC T6/T5 Ga/Gb	II 1 D	Ex ta IIIC Txx °C T500yy °C Da

(13) **SCHEDULE**(14) **to EU-Type Examination Certificate KEMA 05ATEX1016 X****Issue No. 4**(15) **Description**

Pressure Transmitter Type HDA 4...-A-...-(...)-A-... and Type HDA 4...-A-...-(...)-E-... is a two wire transmitter used to convert a pressure signal into a 4 – 20 mA output signal. Double Pressure Transmitter Type HDA 4...-AA-...-E-... (..) is the same type, but fully redundant. Two pressure sensor cells each separated and both are designed as a two-wire (4...20 mA) system.

The electrical components of the transmitter are completely encapsulated within a metal enclosure; the electrical connections are done by a connector or via a permanently connected cable. The enclosure of Pressure Transmitter Type HDA 4...-A-...-(...)-g-... and Type HAD 4...-AA-...-g-... (..) (with g = 9, A, B or C) provides a degree of protection of at least IP64 in accordance with EN 60529.

All variations of electrical connections are allowed for the intrinsically safe versions.

Thermal dataAmbient temperature range:

For Pressure Transmitter Type HDA 4abc-A-d-(e)-Afg-h-i1 j k and

Type HDA 4abc-A-d-(e)-Efg-h-i1 j k (versions with a single pressure sensor cell):

- apparatus in types of protection Ex ia I, Ex ia IIC and Ex ia IIIC: -40 °C to +60 °C;
- apparatus in types of protection Ex ic IIIC, Ex ta IIIC, Ex tb IIIC and Ex tc IIIC: -40 °C to +80 °C;
- apparatus in types of protection Ex na IIC, and Ex ic IIC: -40 °C to +85 °C.

For Double Pressure Transmitter Type HDA 4abc-AA-d-e-Efg-hij (k) (version with two pressure sensor cells):

- apparatus in types of protection Ex ia I, Ex ia IIC and Ex ia IIIC: -40 °C to +70 °C;
- apparatus in types of protection Ex ic IIIC, Ex ta IIIC, Ex tb IIIC and Ex tc IIIC: -40 °C to +80 °C;
- apparatus in types of protection Ex na IIC, and Ex ic IIC: -40 °C to +85 °C.

Temperature class and the maximum surface temperature:

The temperature class and the maximum surface temperature T and T₅₀₀ are depending on the maximum ambient temperature:

For Pressure Transmitter Type HDA 4abc-A-d-(e)-Afg-h-i1 j k and Type HDA 4abc-A-d-(e)-Efg-h-i1 j k (versions with a single pressure sensor cell):

Maximum ambient temperature	Temperature class	Max surface temperature T	Max surface temperature T ₅₀₀
60 °C	T6	80 °C / 85 °C	90 °C
70 °C	T5	90 °C	100 °C
80 °C		100 °C	110 °C
85 °C	T4		

For Double Pressure Transmitter Type HDA 4abc-AA-d-e-Efg-hij (k) (version with two pressure sensor cells):

Maximum ambient temperature	Temperature class	Max surface temperature T	Max surface temperature T ₅₀₀
60 °C	T6	85 °C	120 °C
70 °C	T5	95 °C	130 °C
80 °C		105 °C	140 °C
85 °C	T4

Electrical dataIntrinsically safe versions:

Supply/output circuit (connections + and -):
in type of protection intrinsic safety Ex ia I, Ex ia IIC, Ex ic IIC and Ex ia IIC, only for connection to a certified intrinsically safe circuit, with the following maximum values:

Pressure Transmitter Type HDA 4abc-A-d-(e)-fg-h-i1 j k:

$U_i = 28 \text{ V}$; $I_i = 100 \text{ mA}$; $P_i = 1 \text{ W}$; $C_i = 22 \text{ nF}$; $L_i = 0 \text{ mH}$.

Double Pressure Transmitter Type HDA 4abc-AA-d-e-Efg-hjj (k), when connected to 2 intrinsically safe power supplies:

Signal 1: $U_i = 28 \text{ V}$; $I_i = 100 \text{ mA}$; $P_i = 0,7 \text{ W}$; $C_i = 22 \text{ nF}$; $L_i = 0 \text{ mH}$;

Signal 2: $U_i = 28 \text{ V}$; $I_i = 100 \text{ mA}$; $P_i = 0,7 \text{ W}$; $C_i = 22 \text{ nF}$; $L_i = 0 \text{ mH}$.

Double Pressure Transmitter Type HDA 4abc-AA-d-e-Efg-hjj (k), when connected to 1 intrinsically safe power supply:

Signals 1 + 2: $U_i = 28 \text{ V}$; $I_i = 100 \text{ mA}$; $P_i = 0,7 \text{ W}$; $C_i = 33 \text{ nF}$; $L_i = 0 \text{ mH}$.

From a safety point of view, the supply/output circuit of Pressure Transmitter Type HDA 4...-A-...-(...)-N-... and Type HDA 4...-AA-...-N-... (..) shall be considered to be connected to earth.

Other versions:

Supply/output circuit (connections + and -):

$U \leq 28 \text{ V}$ All models;

$P \leq 1 \text{ W}$ Pressure Transmitter Type HDA 4abc-A-d-(e)-fg-h-i1 j k;

$P \leq 1,4 \text{ W}$ Double Pressure Transmitter Type HDA 4abc-AA-d-e-Efg-hjj (k)

Signal 1 $\leq 0,7 \text{ W}$ and signal 2 $\leq 0,7 \text{ W}$.

Installation instructions

The instructions provided with the product shall be followed in detail to assure safe operation.

(16) **Report Number**

No. NL/KEM/ExTR08.0003/04.

Page 6/7

Form 227A
Version 1 (2016-04)

(13) **SCHEDULE**

(14) **to EU-Type Examination Certificate KEMA 05ATEX1016 X**

Issue No. 4

(17) **Specific conditions of use**

Pressure transmitters with an enclosure containing light metals, when used in a potentially explosive atmosphere requiring apparatus of equipment Category 1 G or M1, shall be installed such, that even in the event of rare incidents, an ignition source due to impact or friction between the enclosure and iron/steel is excluded.

For installation of the pressure transmitter between areas where the use of Category 1 apparatus is required and areas where the use of Category 2 apparatus is required, the following applies: The internal separation element shall be protected against environmental stress, which might adversely affect the separation element. The material of the separation element shall be obtained from the data supplied by the manufacturer.

The pressure transmitter may alternatively be used with separately supplied certified cable entries or conduit entries that are rated for the intended application.

(18) **Essential Health and Safety Requirements**

Covered by the standards listed at item (9)

(19) **Test documentation**

As listed in Report No. NL/KEM/ExTR08.0003/04.

(20) **Certificate history**

Issue 1 Project no. 207380100:

- initial assessment.

Issue 2 Project no. 212870200:

- assessment to latest editions of the standards;
- added models in types of protection Ex nA IIC and Ex ic IIC;
- added versions with new electrical and mechanical connections;
- added models in types of protection Ex ta, Ex tb and Ex tc.

Issue 3 Project no. 217430700:

- added models E Series
- assessment of minor changes that do not affect the type of protection.

Issue 4 Project no. 219063200:

- added Pressure Transmitter Type HDA 4abc-AA-d-e-Efg-hjj (k), which is the same type as previous evaluated as given in report NL/KEM/ExTR08.0003/03, but conducted completely redundant. Two pressure sensor cells each separated and both are designed as a two-wire (4 ... 20 mA) system;
- the maximum value of P_i is changed from 1 W to 1,4 W (2 x 0,7 W) for the redundant version;
- assessment in accordance with latest edition of EN 60079-26 and EN 60079-31
- KEMA 05ATEX1021 Iss 2 integrated in this certificate, Identical products with types of protection Ex ic, Ex nA and Ex tc.
